## 5. Publications

My website <http://simonburgesseconomics.co.uk/> presents my research on the economics of education with more structure, as well as my policy writing.

My research is about:

- Teachers and pupils;
- School accountability;
- School choice, admissions and equity; and
- Ethnicity in education.

### Teachers & Pupils

The most important question in this field at the moment is: how can we raise average teacher effectiveness? Nothing matters for attainment half as much as this. And more specifically, how can we raise teacher effectiveness in schools in disadvantaged neighbourhoods? My work on teachers focusses on these issues: measuring teacher effectiveness. and analysing policies that might increase it. I also think that pupil motivation, engagement and effort is a crucial theme, though there is less consensus on this in the field. I have shown how much it matters for attainment, and am looking at different sorts of motivation and again whether policy can help.

### School Accountability

Schools are entrusted with a huge amount of money – around £30bn a year in England – and developing the future skills of our children. Despite £30bn being quite a lot of money, the latter is far more valuable than the former. Schools should be held accountable for how they deal with those. In England, the accountability system involves publicly available comparative school performance tables, and inspections by OFSTED. I have been exploring whether school accountability matters, what are the implications of different accountability regimes for attainment and inequality in attainment, and what is the best form for accountability.

### School choice, admissions and equity

At the core of every education system is a system for assigning pupils to schools. This might be simply by residence – you go to your local school. Or it might be based on an exam score – like the school tracking systems in a number of European countries and how the grammar school used to operate in England. Or it might be based on parental choice of school, like the system we have now in most of England. How this assignment system works has strong implications for the average level of attainment, for inequality in attainment, and specifically for how well children from deprived communities do. Figuring out these implications is what my research here is all about.

### Ethnicity in education

Two big themes in discussions of ethnicity in education are: how well do ethnic minority pupils achieve in schools, particularly relative to the majority group? And, to what extent are these pupils segregated in largely mono-ethnic schools? We have been analysing ethnic segregation in schools in England for a decade now, and produced the first national results for England. That work continues. We were also the first to show nationally the high average

levels of attainment and progress that most ethnic minority groups make in England. That work lies behind my recent research on the ‘London Effect’ in secondary schools, which is also an on-going project.
